

What is IQ Test ?

What is IQ? (Intelligent Quotient)

An Intelligent Quotient indicates a person's mental abilities, and compares it to the people of the same age.

Intelligence tests are psychological tests that are designed to measure a variety of mental functions, such as reasoning, comprehension, and judgment.

These tests also provide information on cultural and biological difference among people...

What is the aim of IQ Test?

The goal of intelligence tests is to obtain an idea of the person's intellectual potential.

Who must do IQ Test? (Age 6 onwards)

All children can benefit from it.

The parents and students will have a realistic picture of his/her mental abilities and can set expectations accordingly.

A realistic picture can be an eye opener and reduce unwarranted stress.

parents can shape their child's academic performance and plan for the future in tandem with the results.
